

## Instructions to Pair Helwig's BPK-Probe to Android Phones

If you are an Android user and have the latest version, Android Version 12, you may have to change some permission settings before your device will allow access to the BPK-Probe DataLink app. Please follow these steps to allow access to the app.

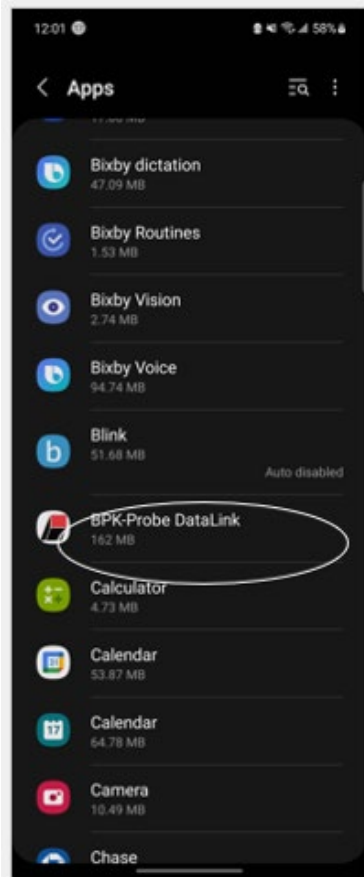

1. Download the app to your device following the instructions in the **Getting Started** section of the Data-Link web page.
  - Activate your BPK-Probe by pressing and releasing the test trigger switch. The Probe's screen will light up.
  - From the app, tap "Scan for BPK-Probe". If you immediately get the **Device Not Found** screen (below), you need to do a few quick steps to activate your device.

If you immediately see this screen when scanning for a Probe, you need to change some settings.

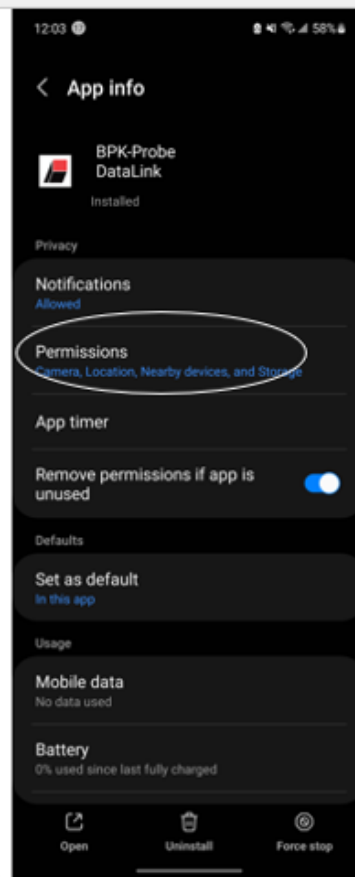

1. Verify if your Android is currently at Version 12.

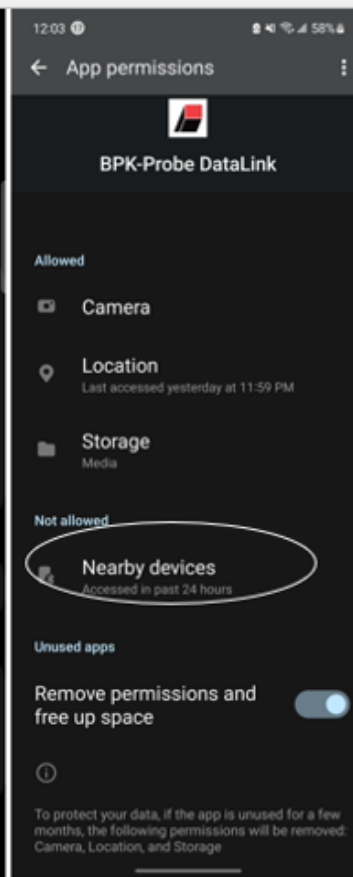

Open DataLink app

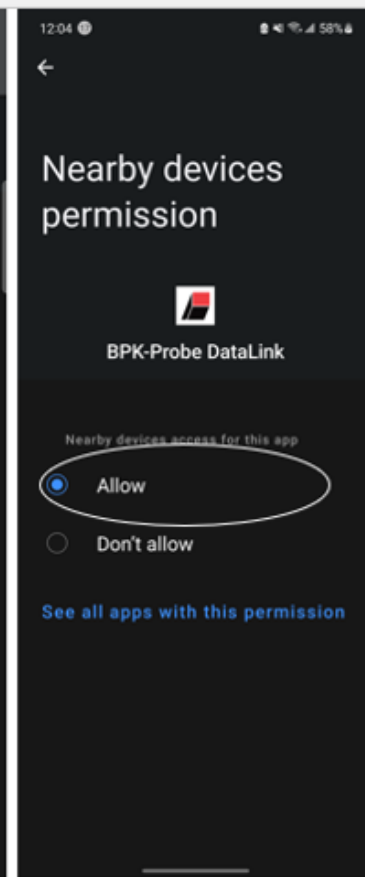

Tap on Permissions

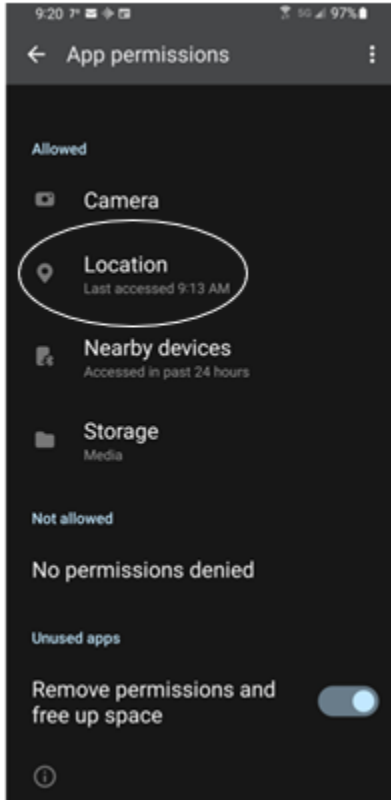

Select Nearby Devices

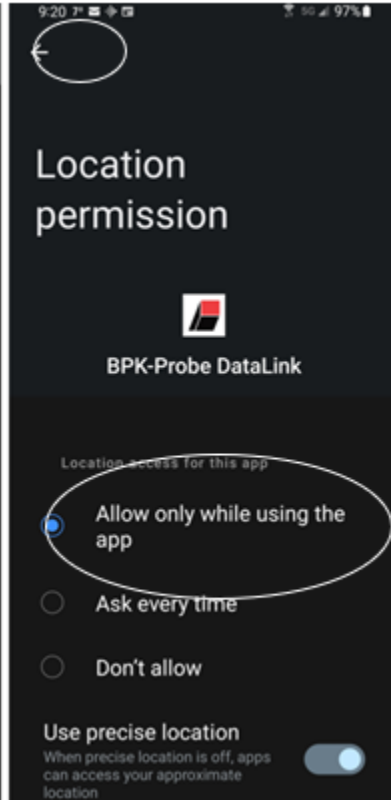

Select Allow. Then use the back arrow.

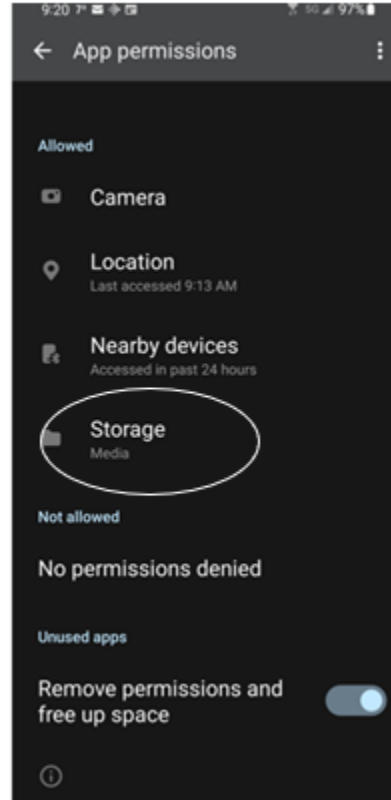

Next, select Location

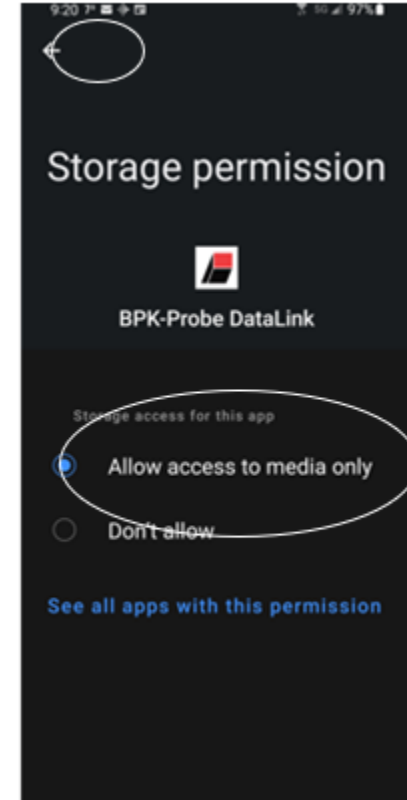

Select Only When using the App. Then use back arrow.

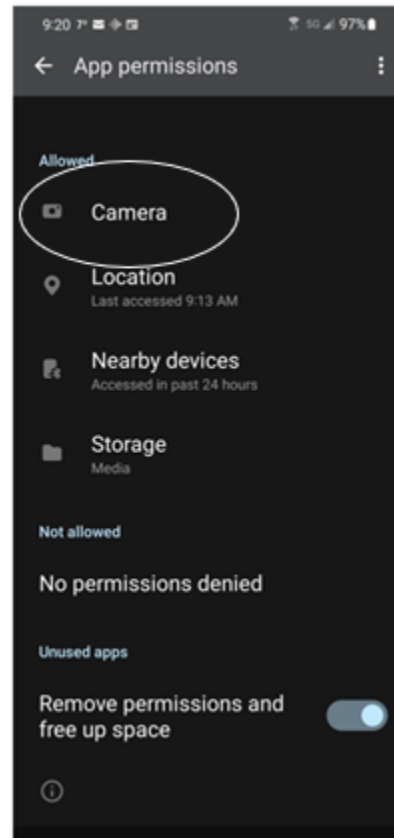

Select Storage

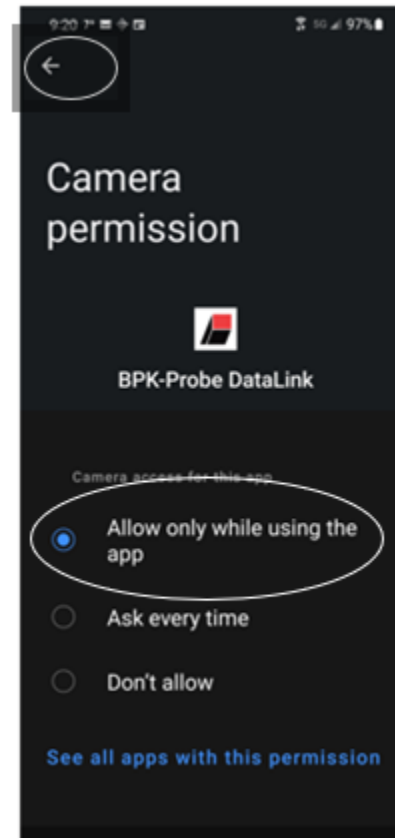

Select Allow Access to Media Only. Then use back arrow.

Select Camera

Select Allow Only While Using the App. Then use back arrow.

Your set-up is complete.

- Using the back arrow, back all the way out to your home screen.
  - Locate and re-open the Helwig DataLink app.
- Wake up (activate) the BPK-Probe by pressing and releasing the test trigger switch
  - From the ap, select **Scan for BPK-Probe**.
  - Your specific BPK-Probe ID will appear in a search results screen. Select your Probe ID and watch for connection confirmation.
- Go to the DataLink web page for instructions on how to connect, test, store, and export application and test data.
