

Main Shaft Bearing Protection

OEM APPROVED FOR WIND TURBINES

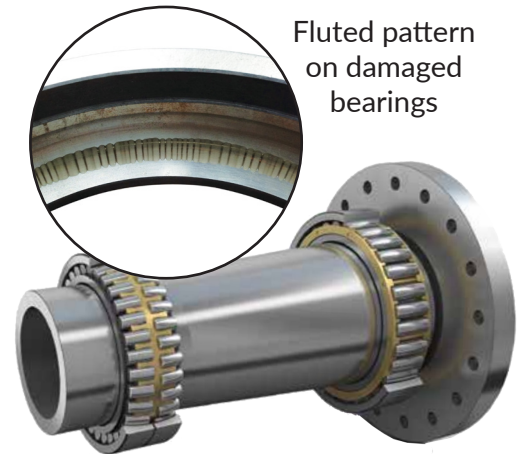

The Helwig Solution

The main bearings on a wind generator are susceptible to damage from static discharges and lightning strikes. This can result in premature bearing failure, downtime, and expensive repairs.

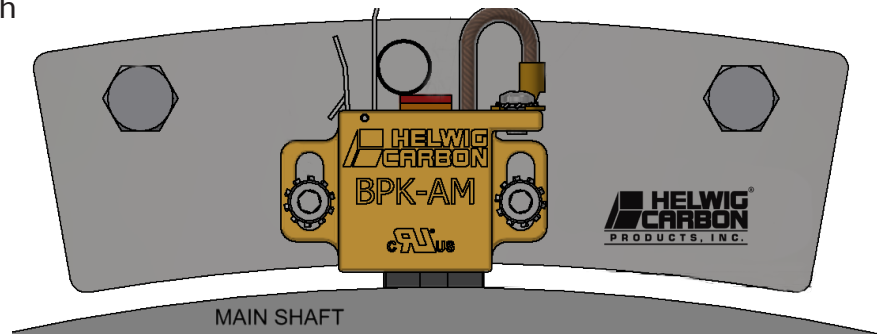

The BPK-AM bearing protection kit utilizes a proprietary silver graphite brush to instantly ground any damaging currents. The BPK-AM comes preinstalled on a ready-made bracket for easy installation in the field.

Features:

- Durable, heavy-duty brass holder
- Proprietary K007 silver graphite brush
- Mounted on specially engineered bracket to fit directly on main shaft
- Easy installation using existing bolt pattern
- Extra long life cycle
- Maintenance free solution
- Kits are in stock & ready to ship
- **OEM Approved**

MAIN SHAFT BPK ASSEMBLY

Additional Products & Services:

- Shaft grounding for pitch motors
- Lightning protection
- Retrofit generator brush holder assembly
- Custom engineered wind solutions
- Trained up-tower support
